

**At BuildingsNY Show, U.S. Energy Group
Tells Building Owners and Managers:
DRIVE EFFICIENCY TO REDUCE FUEL USE and
VERIFY DELIVERIES TO PREVENT HEATING OIL THEFT**

Fresh Meadows, NY – At BuildingsNY, U.S. Energy Group showed hundreds of building owners and property managers how they can drive building efficiency to save money on fuel and why it is important to accurately and independently verify deliveries to prevent heating oil thefts. The event, which was held on June 17th and 18th at the Javits Center, was an opportunity for U.S. Energy Group executives to greet existing customers and to show prospective customers the U.S. Energy Group system, which includes the USE Controller EMS, the USE Manager 5.1 and the patented Verifier Digital Fuel Gauge. The booth, which featured the slogan “DRIVE Fuel Savings,” was designed to look like an auto racetrack, complete with checkered flags.

“I’m thrilled that our booth had such great traffic,” stated Dan Margulies, Chief Operating Officer of U.S. Energy Group. “With fuel prices so high, everyone recognizes how important it is to control heating costs and prevent oil theft.”

Founded in 1978 by CEO Jerry Pindus, U.S. Energy Group is a metro-New York based firm, which develops and integrates energy control, monitoring and analysis systems for large residential properties. With the slogan “Building Efficiency Through Information Management,” the company’s three flagship products include: **USE Manager**[™], an internet-based building management service which provides information to keep buildings running safely and cost-efficiently; **USE Controller**[™] Energy Management System (EMS), which controls and monitors energy and fuel use and provides proven savings of 15%-40% on fuel consumption, while returning investment in less than two years; and **USE Verifier**[®], a patented advanced ultrasonic measurement system which enables building owners and managers to verify the amount of oil they receive, as well as control their inventory and budget. With U.S. Energy Group’s products and services, building owners save money, conserve energy and enhance tenants’ comfort.
